

Artificial Intelligence Practice Document

Artificial Intelligence (AI) enables computers to perform tasks that usually require human intelligence.

Machine Learning (ML) is a subset of AI that learns patterns from data.

Deep Learning (DL) is a subset of ML that uses neural networks with many layers.

Common AI applications:

- Chatbots
- Recommendation systems
- Image classification
- Speech recognition
- Document Question Answering (RAG)

LangChain is a framework for building LLM-powered applications.

A document loader reads data from files such as PDF, TXT, DOCX, and CSV.

After loading, documents are usually split into chunks, converted into embeddings, stored in a vector database, and retrieved during question answering.

This file is intended for practicing LangChain document loaders.
